URITECT INC. · JUVO VENTURES Q&A

Uritect × Juvo Ventures

80 questions to prepare for: 40 shaped around Juvo's thesis, and 40 of the hardest questions investors put to companies like ours.

Meeting with Juvo Ventures · October 2026
For the Uritect team · Confidential

October 2026

BEFORE YOU PRESENT

80 questions, ready to answer.

Juvo Ventures is an early-stage fund backed by Western Governors University (WGU), a nonprofit, competency-based university. Its line is "Investing in the future of learning and work": it backs companies that make learning more accessible, connect people to opportunity and show measurable outcomes at scale.

Uritect is not an education company, and Juvo will know it. Part 1 shows where we honestly meet their thesis: Arch School, Archibi as a learning and working tool for students and professionals, and Find Pro as a pathway to work. Never stretch the fit; say plainly where it ends.

Part 2 is the hard part: the questions experienced investors use to test any consumer AI company. Answer them calmly, briefly and without defensiveness. A clear "we don't know yet, here is how we will find out" beats a confident guess.

Numbered red slots mark figures we must confirm before the meeting. Never estimate a number on the spot.

Numbers to add before the meeting (45 slots)

SLOT	WHAT TO ADD	VALUE	USED IN
ADD 1	Share of paying users on the Pro plan		Q3, Q51
ADD 2	Arch School participants and certificates awarded		Q3, Q10
ADD 3	Arch School learner outcomes, such as projects completed or further study		Q10
ADD 4	Any school or university pilots, planned or running		Q11
ADD 5	Decision on a student or education plan		Q12
ADD 6	Find Pro professional profile data we can share, such as solo practices or women-led firms		Q17
ADD 7	Approved Find Pro professionals		Q18
ADD 8	Client contacts made through Find Pro		Q18
ADD 9	Brightment installations completed and average job value		Q21, Q28
ADD 10	Current team size, full-time and part-time		Q22
ADD 11	Plans for Archibi languages or accessibility features		Q31
ADD 12	Raise amount		Q32
ADD 13	Instrument and key terms		Q32

SLOT	WHAT TO ADD	VALUE	USED IN
ADD 14	Amount or role sought from Juvo, such as lead or participant		Q32
ADD 15	Amount already committed, if any		Q33
ADD 16	Corporate structure and investment route for U.S. investors		Q34
ADD 17	Use-of-funds breakdown		Q35
ADD 18	Board or investor reporting arrangements		Q38
ADD 19	Policy on storing user photos and using them for AI training		Q44
ADD 20	Average AI cost per render		Q45
ADD 21	Subscriber retention for homeowners versus professionals		Q48
ADD 22	Bottom-up market sizing for Archibi users and revenue		Q49
ADD 23	Current U.S. users or early U.S. traction		Q50
ADD 24	Paying subscribers		Q51
ADD 25	Share of designs followed by a Furniture Finder search or a Find Pro contact		Q52
ADD 26	Gross margin		Q54
ADD 27	Customer acquisition cost (CAC)		Q55
ADD 28	Customer lifetime value (LTV)		Q55
ADD 29	Monthly subscriber churn		Q55
ADD 30	Planned Find Pro or partner revenue model, if decided		Q56
ADD 31	Whether Furniture Finder earns affiliate or partner revenue today		Q57
ADD 32	Runway in months		Q59, Q74
ADD 33	Board composition, independent directors or advisors		Q61
ADD 34	Key-person protections, such as vesting or documentation		Q62
ADD 35	One honest example from the founders		Q63
ADD 36	Relevant prior experience of the founders and team		Q64
ADD 37	Founders' time commitment and personal investment		Q65
ADD 38	Funding raised to date, including grants and investors		Q66
ADD 39	Plans for client reviews or ratings of professionals		Q69

SLOT	WHAT TO ADD	VALUE	USED IN
ADD 40	Terms on image ownership and usage rights		Q70
ADD 41	Brightment insurance coverage and warranty terms		Q72
ADD 42	Total capital needed to reach profitability, and the path to it		Q73
ADD 43	Milestones this round reaches		Q74
ADD 44	Valuation or cap, and the reasoning behind it		Q75
ADD 45	The three metrics the founders review weekly, and their current values		Q76

Key facts to have at hand

Juvo Ventures	Early-stage venture firm, Salt Lake City, backed by WGU · "Investing in the future of learning and work" · double bottom line: financial return and social impact
Juvo focus	K-12 and higher-ed technology, workforce development and career pathways, financing for learners, healthcare education · says 100% of its portfolio aligns with the UN Sustainable Development Goals
Juvo portfolio	Fund II: SchoolAI, EdVisorly, BoodleBox, Evress, TalentGuard · Fund I includes FutureFit AI, Riipen, Mursion, VictoryXR, SV Academy, SchooLinks, Orijin, Cinematic Health Education
Juvo team	Tara Rosander (Managing Director) · Scott Pulsipher and Nadeem Syed (General Partners) · Zane Busteed and Kanak Durga Kunapuli (Principals) · Davis Pulsipher (Research Analyst)
Check size	Not published by Juvo. Third-party databases list $10K–$300K; treat as unverified and ask
Uritect	Toronto, University of Toronto Schwartz Reisman Innovation Campus · flagship Archibi AI live on iOS and Android · Find Pro at pro.archibi.ca
Learning at Uritect	Arch School: free design education, women-only workshops under our Empowering Women programme, certificate on completing a class project, Design Foundations video library
Plans	Free (5 renders) · Plus $6.99/mo (90 renders) · Pro $29.99/mo (450 renders, commercial rights) · Enterprise by arrangement

The questions at a glance

PART 1 · WHY JUVO, WHY URITECT

Q1 Juvo invests in the future of learning and work. Why are you talking to us?
Q2 If you had to place Uritect in our portfolio, which companies would you sit next to?
Q3 What share of your business is actually learning or work, versus consumer home design?
Q4 Would you change your strategy to fit our thesis better?
Q5 What does Uritect get from Juvo beyond money?
Q6 Why is now the right time for Uritect to take early-stage capital?
Q7 What is the biggest barrier your users face, and how do you remove it?

PART 1 · LEARNING

Q8 How does Archibi help people learn, not just get a pretty picture?
Q9 Tell us about Arch School. What exactly does a learner get?
Q10 How many people has Arch School reached, and what happened to them afterwards?
Q11 Could Archibi be used in design and architecture schools?
Q12 Do you offer student pricing or free access for learners?
Q13 Is there a role for WGU students or graduates in Uritect's products?
Q14 AI can do the design work. Doesn't that make design skills less valuable to learn?
Q15 Could AI designs teach people bad habits, or suggest things that are unsafe to build?

PART 1 · WORK AND OPPORTUNITY

Q16 How does Find Pro create economic opportunity?
Q17 Who are the professionals on Find Pro, and are you reaching people who are usually left out?
Q18 How do you measure whether Find Pro actually leads to paid work?
Q19 Could Find Pro help newly qualified or career-changing professionals get their first clients?
Q20 Is Find Pro only for designers, or can tradespeople use it too?
Q21 Brightment is a construction service. Is that part of the future of work?
Q22 Does Uritect itself create good jobs?
Q23 Blink20 is a free eye-break app. Why is that in a pitch about work?

PART 1 · IMPACT AND MEASUREMENT

Q24 Juvo backs companies with a double bottom line. What is Uritect's social impact, in one sentence?
Q25 Which UN Sustainable Development Goals does Uritect align with?
Q26 What impact metrics would you report to us each quarter?
Q27 How do you know your products improve outcomes, and not just engagement?
Q28 Brightment talks about safety. What is the actual impact?
Q29 Women hold founding and key roles. How does that show up in the company?
Q30 When growth and mission pull in different directions, which wins?
Q31 How do you make sure AI design tools are accessible, and don't widen gaps?

PART 1 · WORKING TOGETHER

Q32 How much are you raising, and how much would you like from Juvo?
Q33 Who else is in the round?
Q34 We are a U.S. fund. How does investing in a Canadian company work?
Q35 How would you use our money specifically?
Q36 What would you want from us in the first 90 days after investing?
Q37 Would you accept impact milestones as part of our investment?
Q38 How will you report to investors?
Q39 What would make this investment a success for Juvo in five years?

PART 1 · QUESTIONS TO ASK JUVO

Q40 What should we ask Juvo before the meeting ends?

PART 2 · MOAT AND AI

Q41 You don't own the AI models. Aren't you just a wrapper around someone else's technology?
Q42 What happens when a model provider, or a phone maker, builds room redesign into its own product?
Q43 What do you have that a well-funded competitor could not copy in six months?
Q44 Do you have any proprietary data?
Q45 Your AI costs scale with usage. How do you avoid losing money on heavy users?
Q46 AI images can be wrong: impossible structures, furniture that doesn't fit. Doesn't that damage trust?

PART 2 · MARKET REALITY

Q47 Harvard's own forecast says remodeling growth is slowing. Why build here now?
Q48 People renovate once every few years. Why would anyone keep paying a monthly subscription?
Q49 How big is the market you can actually reach, not the $519B headline?
Q50 Why will U.S. users choose a Canadian startup they've never heard of?
Q51 Who is actually paying today: homeowners or professionals?
Q52 What evidence do you have that people want design, shopping and hiring in one app?

PART 2 · BUSINESS MODEL

Q53 $6.99 a month is a small number. How does that ever become a venture-scale business?
Q54 App stores take a share of every subscription. What is your real margin?
Q55 What are your CAC and LTV today, and are they sustainable?
Q56 Find Pro is free. When and how will it make money?
Q57 Do you earn anything when a user buys furniture through the Furniture Finder?
Q58 Your Furniture Finder sends users to other stores. Aren't you just giving retailers free customers?
Q59 If revenue doesn't grow as planned, what is your plan B?

PART 2 · FOCUS AND TEAM

Q60 Eight products with a small team. Honestly, how do you stay focused?
Q61 Several of your leaders share a family name. How do you handle governance?
Q62 What happens if your CTO, or another key person, leaves?
Q63 What is the biggest mistake you have made so far, and what did you learn?
Q64 Who on the team has grown a consumer app to scale before?
Q65 Are the founders full-time, and how much have you invested yourselves?
Q66 Why haven't you raised a larger round already?

PART 2 · MARKETPLACE AND RISK

Q67 Two-sided marketplaces are hard. Which side comes first, and how do you avoid an empty market?
Q68 Once a client finds a professional, what stops them from going around you?
Q69 What if a professional you listed does bad work, and the client blames you?
Q70 Who owns the images Archibi creates, and could a user face a copyright problem?
Q71 What if Apple or Google changes its rules, raises its fees or removes your app?
Q72 Brightment cuts into foundations. What is your liability exposure?

PART 2 · CAPITAL AND OUTCOMES

Q73 How much will you need to raise in total before you are profitable?
Q74 What will you have proven by the time you raise your next round?
Q75 Why should we believe your valuation?
Q76 What are the three numbers you look at every week?
Q77 Who would buy Uritect one day?
Q78 What would make you shut down a product, or the whole company?
Q79 Why should we invest now rather than wait six months for more data?
Q80 If we pass today, what would change our mind?

Q1 Juvo invests in the future of learning and work. Why are you talking to us?

Because design is a skill, and a career, that has been closed to most people. Archibi lets anyone learn to see a space the way a designer does, and lets professionals win work from it. Arch School teaches design for free, and Find Pro connects architects, designers and contractors with clients.

We are not an education company, and we won't pretend to be. But the part of Uritect that opens design to new learners and new professionals sits squarely in your thesis.

Q2 If you had to place Uritect in our portfolio, which companies would you sit next to?

Closest to Riipen and FutureFit AI on the work side, because Find Pro connects skilled people with paid projects. Closest to VictoryXR and Mursion on the learning side, because Archibi and Utect 3D teach through seeing and doing in a visual, spatial way.

The difference is our market: the built world, where learning a skill and earning from it happen in the same place.

Q3 What share of your business is actually learning or work, versus consumer home design?

Today most Archibi users are planning their own homes, so the honest answer is that the consumer side is larger. Professionals on the Pro plan and on Find Pro, students using Sketch to Render, and Arch School learners are the learning-and-work side.

Share of paying users on Pro: **ADD 1** share of paying users on the Pro plan. Arch School participants to date: **ADD 2** Arch School participants and certificates awarded.

Q4 Would you change your strategy to fit our thesis better?

We would not bend the company to fit a fund, and we don't think you would want that. What we would do is grow the parts that already fit: Arch School, student access to Archibi, and Find Pro as a pathway to paid work, and measure them properly.

Q5 What does Uritect get from Juvo beyond money?

Three things no other investor offers in the same way: experience in measuring learner and worker outcomes, a network across education and workforce companies, and a link to WGU, one of the largest online universities in the U.S.

That helps us turn Arch School from a good programme into a measurable one, and helps us reach students and early-career professionals in the U.S.

> **NOTE FOR THE PRESENTER** Ask what support Juvo gives its portfolio after investing. Listen more than you talk.

Q6 Why is now the right time for Uritect to take early-stage capital?

Our products are built and live. Archibi is on the App Store and Google Play, Find Pro is open to professionals, and Arch School is running. The next step is growth, especially in the U.S., and that is what early capital is for.

Q7 What is the biggest barrier your users face, and how do you remove it?

Access. A homeowner can't afford a designer for every idea, a learner has no easy way into design, and a new professional has no client list. Archibi gives anyone a designer's eye from one photo, Arch School teaches the fundamentals for free, and Find Pro puts professionals in front of clients who are ready to act.

PART 1 · LEARNING

Q8 How does Archibi help people learn, not just get a pretty picture?

Every design asks the user to make the choices a designer makes: the style, the mood, the colour palette, and the materials for walls, floors, ceilings, façades and paths. Comparing Beautiful and Creative versions of the same room shows the difference between refreshing a space and reimagining it.

People learn by trying many directions quickly, which used to take a designer days.

Q9 Tell us about Arch School. What exactly does a learner get?

Free design education, focused on women and other underrepresented learners. Our featured workshop, Basic Concepts of Interior Design, is a two-hour, women-only online class covering space planning, balance and proportion, colour, lighting and materials. Learners complete a short class project and earn a certificate.

Alongside the workshops, the Design Foundations video library collects hand-picked lessons from respected design educators.

Q10 How many people has Arch School reached, and what happened to them afterwards?

Participants: **ADD 2** Arch School participants and certificates awarded. Follow-up outcomes: **ADD 3** Arch School learner outcomes, such as projects completed or further study.

We have not yet tracked outcomes systematically, and that is exactly where Juvo's experience would help us.

Q11 Could Archibi be used in design and architecture schools?

Yes. Sketch to Render turns a student's hand drawing into a realistic image, which helps students present ideas and test them quickly. Utect 3D, in Alpha, lets people lay out rooms and homes in 3D in the browser.

We have not yet built a programme for schools: **ADD 4** any school or university pilots, planned or running.

Q12 Do you offer student pricing or free access for learners?

Every new user gets 5 free renders, and Arch School is free. A dedicated student plan is not available today: **ADD 5** decision on a student or education plan.

> **NOTE FOR THE PRESENTER** If asked, it is fine to say we would welcome designing a student offer with Juvo's input.

Q13 Is there a role for WGU students or graduates in Uritect's products?

Potentially as learners in Arch School, as early-career professionals on Find Pro, or as users of Archibi in design-related courses. We would welcome exploring this with you, but we have no arrangement with WGU today and would not assume one.

Q14 AI can do the design work. Doesn't that make design skills less valuable to learn?

We see the opposite. AI makes the first image cheap, so judgement becomes the skill that matters: knowing what works in a real space, what can be built, and what a client actually needs. Archibi is clear that its images are concepts, not construction drawings, and hands the real work to qualified professionals.

Arch School teaches the fundamentals that let people use these tools well.

Q15 Could AI designs teach people bad habits, or suggest things that are unsafe to build?

A concept image can show something that is impractical to build, which is why we never present it as a plan. Archibi says plainly that results may not reflect exact dimensions, materials or structural requirements, and points users to a professional for the real work.

In Arch School, we teach the principles behind good design so learners can judge an image, not just admire it.

Q16 How does Find Pro create economic opportunity?

It brings clients to architects, interior designers and contractors who already know what they want, because they arrive with a design in hand. Professionals apply once with their portfolio, CV and documents, pass our review, and are then discoverable by every Archibi user looking for help.

For independent and smaller practices, that is marketing they could not otherwise afford.

Q17 Who are the professionals on Find Pro, and are you reaching people who are usually left out?

Architects, interior designers and contractors, reviewed by our team before their profiles go live. Joining is free.

We do not yet report on who they are by background: **ADD 6** Find Pro professional profile data we can share, such as solo practices or women-led firms.

Q18 How do you measure whether Find Pro actually leads to paid work?

Today we can measure applications, approved profiles and client contacts. Contracts are arranged directly between the client and the professional, so we don't yet see whether a job was signed.

Current figures: **ADD 7** approved Find Pro professionals professionals live; **ADD 8** client contacts made through Find Pro client contacts. Measuring signed work is a priority for the next stage.

Q19 Could Find Pro help newly qualified or career-changing professionals get their first clients?

That is one of the most meaningful things it could do. A new designer has a portfolio but no client list; Find Pro puts that portfolio in front of people who are actively planning a project.

We would like to build this deliberately, for example with Arch School graduates and partner schools.

Q20 Is Find Pro only for designers, or can tradespeople use it too?

Contractors are already one of the three groups on Find Pro, alongside architects and interior designers. A contractor who can show a client a realistic picture of the finished job, before quoting, wins trust faster.

Q21 Brightment is a construction service. Is that part of the future of work?

Yes, in a practical sense. Brightment turns an AI concept into skilled trade work: design, permits, excavation and installation of basement egress windows, most single-window installs finished in a day once the permit is in hand. Every job is real work for skilled tradespeople.

Jobs completed so far: **ADD 9** Brightment installations completed and average job value.

Q22 Does Uritect itself create good jobs?

We are a small team that ships a lot: in 2026 we launched four products across mobile, web and desktop. Women hold founding and key roles, and we hire students and interns alongside experienced engineers.

Team size today: **ADD 10** current team size, full-time and part-time.

Q23 Blink20 is a free eye-break app. Why is that in a pitch about work?

It began as a tool for our own developers, who spend long days at screens, and we released it free on iOS, Android, macOS, Windows and Linux, in 21 languages. It reflects how we think about work: protecting the people doing it.

It is not a revenue line and we won't present it as one.

PART 1 · IMPACT AND MEASUREMENT

Q24 Juvo backs companies with a double bottom line. What is Uritect's social impact, in one sentence?

We open the design of homes and the work of building them to people who were shut out: homeowners who could never afford a designer, learners who never had access to design education, and professionals who struggle to find clients.

Q25 Which UN Sustainable Development Goals does Uritect align with?

Most directly Goal 4, Quality Education, through Arch School; Goal 5, Gender Equality, through our women-focused programme and leadership; Goal 8, Decent Work and Economic Growth, through Find Pro and Brightment; and Goal 11, Sustainable Cities and Communities, through safer, more liveable homes.

> **NOTE FOR THE PRESENTER** Lead with Goals 4, 5 and 8, which match Juvo's thesis. Mention 11 only if asked for more.

Q26 What impact metrics would you report to us each quarter?

- Learners reached and certificates earned through Arch School
- Share of learners who are women or from underrepresented groups
- Professionals approved on Find Pro, and client contacts they receive
- Designs created by users who could not otherwise afford a designer
- Brightment homes made safer with a code-compliant emergency exit

We do not report most of these formally yet. Building this dashboard would be one of our first steps with Juvo.

Q27 How do you know your products improve outcomes, and not just engagement?

Honestly, we have activity data today, not outcome studies. We know how many designs are created and how many people contact professionals; we have not yet proven that a design led to a better renovation or a learner to a new job.

We would rather say that plainly and design the measurement with you than claim results we cannot show.

Q28 Brightment talks about safety. What is the actual impact?

An egress window is a code-compliant emergency exit from a basement. It gives everyone sleeping or living downstairs a real way out in a fire, and it is what allows a basement to become a legal bedroom or rental suite.

More legal basement suites can also add rental housing. Impact so far: **ADD 9** Brightment installations completed and average job value.

Q29 Women hold founding and key roles. How does that show up in the company?

Our COO and Co-Founder and our CPO are women, and Arch School exists specifically to open design education to women. It shapes who we build for and who we hire.

Q30 When growth and mission pull in different directions, which wins?

We look for the version that serves both, and usually there is one: Arch School builds the trust that brings users to Archibi, and Find Pro's free entry builds the supply that makes the marketplace work.

Where there is a real conflict, we would bring it to our board and investors openly rather than decide quietly.

Q31 How do you make sure AI design tools are accessible, and don't widen gaps?

The core tools are free to try, the app works on an ordinary phone, and a single photo is enough. You don't need design training, software or a computer.

Archibi is in English today; Blink20 already supports 21 languages, so we know how to localise when the time comes. **ADD 11** plans for Archibi languages or accessibility features

PART 1 · WORKING TOGETHER

Q32 How much are you raising, and how much would you like from Juvo?

We are raising **ADD 12** raise amount through **ADD 13** instrument and key terms. We would welcome Juvo **ADD 14** amount or role sought from Juvo, such as lead or participant.

> **NOTE FOR THE PRESENTER** Juvo does not publish its check size; databases suggest $10K–$300K. Ask what a typical first check looks like.

Q33 Who else is in the round?

Committed so far: **ADD 15** amount already committed, if any. Uritect is supported by Pycap Inc. and the University of Toronto entrepreneurship community.

Q34 We are a U.S. fund. How does investing in a Canadian company work?

ADD 16 corporate structure and investment route for U.S. investors

We are glad to walk through the structure with your counsel.

Q35 How would you use our money specifically?

In line with our overall plan: growing Archibi in the U.S., scaling the AI behind it, and building partnerships and a strong bench of U.S. professionals on Find Pro. With Juvo specifically, we would put part of it toward measuring and growing the learning and work outcomes in this sheet.

Split: **ADD 17** use-of-funds breakdown.

Q36 What would you want from us in the first 90 days after investing?

Help designing our impact metrics, introductions to education and workforce partners who could bring Archibi or Arch School to their learners, and candid feedback on our U.S. plan.

Q37 Would you accept impact milestones as part of our investment?

We would welcome agreeing a small set of impact goals with you, such as learners reached through Arch School and professionals approved on Find Pro, as long as they are measurable and sit alongside the commercial milestones rather than replacing them.

Q38 How will you report to investors?

A short monthly update with the key numbers, wins and asks, and a fuller quarterly report including the impact metrics we agree with you. **ADD 18** board or investor reporting arrangements

Q39 What would make this investment a success for Juvo in five years?

A return worthy of venture capital, and a clear record of people who learned design, found work or made their homes safer because of us. If we cannot show both, we have not met your double bottom line.

PART 1 · QUESTIONS TO ASK JUVO

Q40 What should we ask Juvo before the meeting ends?

- Does a company like ours, in home design and the building trades, fit your Fund II mandate?
- What does a typical first check look like, and do you lead or follow?
- How do you help portfolio companies measure learner and worker outcomes?
- Are there portfolio companies or WGU programmes where Archibi or Arch School could be useful?
- What would you need to see from us to move to the next step, and on what timeline?

> **NOTE FOR THE PRESENTER** Ending with good questions matters as much as answering theirs. Take notes and send a thank-you within 24 hours.

PART 2 · MOAT AND AI

Q41 You don't own the AI models. Aren't you just a wrapper around someone else's technology?

The model makes the pixels; we make the product. The value is in what surrounds the picture: styles and controls designed by people who understand buildings, a Furniture Finder across more than 100 stores, a reviewed network of professionals, and an app that carries someone from idea to hire.

Many successful software companies are built on infrastructure they don't own. What matters is that customers come back for the whole experience, not the model.

Q42 What happens when a model provider, or a phone maker, builds room redesign into its own product?

Then making a redesigned picture becomes free everywhere, and we should be ready for that. A general-purpose assistant will not shop the furniture in your room or put a reviewed local contractor in front of you.

Our plan assumes the picture becomes a commodity. That is why we are investing in Shop and Hire, not just Design.

Q43 What do you have that a well-funded competitor could not copy in six months?

The app itself could be copied. What takes time is the network: reviewed professionals, retail connections and the habit of starting a project in Archibi. Those grow with every user and are slow to copy.

We are early in building them, and this round is about building them faster.

Q44 Do you have any proprietary data?

We have a growing record of which styles, materials and choices people make for real rooms, and which designs lead them to shop or contact a professional. Over time that tells us what people actually want for their homes.

How we may use user photos: **ADD 19** policy on storing user photos and using them for AI training.

Q45 Your AI costs scale with usage. How do you avoid losing money on heavy users?

Every plan has a fixed allowance: 5 renders free, 90 a month on Plus and 450 on Pro, with extra renders sold as top-ups. Nobody can use more AI than they have paid for.

Average AI cost per design: **ADD 20** average AI cost per render.

Q46 AI images can be wrong: impossible structures, furniture that doesn't fit. Doesn't that damage trust?

It can, which is why we are clear that the images are concept visualisations, not construction drawings. They help people decide and explain an idea, and a qualified professional takes it from there.

Every Brightment project is confirmed by a site assessment before any work begins.

PART 2 · MARKET REALITY

Q47 Harvard's own forecast says remodeling growth is slowing. Why build here now?

Slower growth in a market of about $519 billion a year is still a very large market. And when budgets are tight, people want to be surer before they spend, which is exactly what seeing a design first gives them.

We are not betting on a boom; we are betting on people wanting to get expensive decisions right.

Q48 People renovate once every few years. Why would anyone keep paying a monthly subscription?

Many won't, and we plan for it. Homeowners often subscribe for the months of a project, which is why we offer monthly plans and top-ups. Professionals use Archibi continuously, which is why Pro exists.

Retention by segment: **ADD 21** subscriber retention for homeowners versus professionals.

Q49 How big is the market you can actually reach, not the $519B headline?

The headline is total spending; our revenue comes from the people deciding how to spend it. Our reachable market is homeowners and renters planning a project, plus the agents, designers, architects and contractors who use designs in their work.

Our estimate: **ADD 22** bottom-up market sizing for Archibi users and revenue.

> **NOTE FOR THE PRESENTER** Show the arithmetic if you have it. Investors trust a small, reasoned number more than a big quoted one.

Q50 Why will U.S. users choose a Canadian startup they've never heard of?

Most people never ask where an app was built; they ask whether it helps them. Archibi is sold through the App Store and Google Play like every other app, and a before-and-after redesign is easy to share.

Early U.S. usage: **ADD 23** current U.S. users or early U.S. traction.

Q51 Who is actually paying today: homeowners or professionals?

Paying subscribers: **ADD 24** paying subscribers, of whom **ADD 1** share of paying users on the Pro plan are on Pro.

We expect homeowners to be the larger group by number and professionals to be more valuable per person.

Q52 What evidence do you have that people want design, shopping and hiring in one app?

Every Archibi design ends with a direct path to Find Furniture and Find a Pro, so we can see how many people take the next step. **ADD 25** share of designs followed by a Furniture Finder search or a Find Pro contact

If that number is low, it tells us to improve the journey, and we will say so.

PART 2 · BUSINESS MODEL

Q53 $6.99 a month is a small number. How does that ever become a venture-scale business?

Plus is the entry point, not the whole business. The higher-value parts are Pro for professionals at $29.99 a month, Enterprise for teams, and in time the marketplace and partner revenue that comes when a design leads to a purchase or a project.

A low first price gets people in; the value is in what they do next.

Q54 App stores take a share of every subscription. What is your real margin?

Gross margin after AI and app store fees: **ADD 26** gross margin. We also sell by card, and Enterprise is arranged directly, which avoids app store fees.

Q55 What are your CAC and LTV today, and are they sustainable?

Customer acquisition cost **ADD 27** customer acquisition cost (CAC); lifetime value **ADD 28** customer lifetime value (LTV); monthly churn **ADD 29** monthly subscriber churn.

If the numbers are still early, we will show the direction they are moving rather than a projection.

Q56 Find Pro is free. When and how will it make money?

Free is deliberate while we build supply; charging professionals before we can send them clients would be the wrong order. Once clients and professionals meet regularly, there are several options, from paid placement to fees on introductions.

Current thinking: **ADD 30** planned Find Pro or partner revenue model, if decided.

Q57 Do you earn anything when a user buys furniture through the Furniture Finder?

ADD 31 whether Furniture Finder earns affiliate or partner revenue today

Retail partnerships are part of what we are seeking, because every design is a moment when someone is ready to buy.

Q58 Your Furniture Finder sends users to other stores. Aren't you just giving retailers free customers?

Today the Finder is there to make designs useful, and it is: people can buy what they see. That same traffic is what gives us leverage with retailers, because we bring them customers at the moment they are ready to buy.

Turning that into partner revenue is one of the goals of this round.

Q59 If revenue doesn't grow as planned, what is your plan B?

We would lean harder into the segments that pay most: Pro subscribers, Enterprise teams and partner revenue, and slow spending on broad consumer marketing. Brightment also shows us a service model where one customer is worth far more than one subscription.

Runway with and without this round: **ADD 32** runway in months.

PART 2 · FOCUS AND TEAM

Q60 Eight products with a small team. Honestly, how do you stay focused?

The raise is for Archibi, and Archibi gets the majority of our time and money. Several of the others are small by design: Blink20 began as an internal tool, ArchNews and CanadaTechNews are publications, and Utect 3D is in Alpha.

We are prepared to pause anything that doesn't help Archibi grow.

> **NOTE FOR THE PRESENTER** Don't defend every product. Showing you will cut things is a strength.

Q61 Several of your leaders share a family name. How do you handle governance?

It is a fair question. Our leadership team brings complementary skills in business, operations, product and technology, and we know outside investors need independent oversight.

Governance today: **ADD 33** board composition, independent directors or advisors. We would welcome an investor or independent seat on the board as part of this round.

> **NOTE FOR THE PRESENTER** Answer calmly and directly. Investors ask this of every family-led company.

Q62 What happens if your CTO, or another key person, leaves?

We ship from a shared codebase with back-end, Android, front-end and AI developers, so no single person holds the product. This round funds more senior hires, which further reduces that risk.

ADD 34 key-person protections, such as vesting or documentation

Q63 What is the biggest mistake you have made so far, and what did you learn?

ADD 35 one honest example from the founders

> **NOTE FOR THE PRESENTER** Pick a real, specific example and spend most of the answer on what changed afterwards.

Q64 Who on the team has grown a consumer app to scale before?

ADD 36 relevant prior experience of the founders and team

Where we lack experience, the first hires from this round, in U.S. growth and partnerships, are meant to fill it.

Q65 Are the founders full-time, and how much have you invested yourselves?

ADD 37 founders' time commitment and personal investment

Q66 Why haven't you raised a larger round already?

We chose to build first. With support from Pycap Inc. and the University of Toronto community, we launched our products before asking for significant outside capital, so investors now see working products rather than a plan.

Funding to date: **ADD 38** funding raised to date, including grants and investors.

Q67 Two-sided marketplaces are hard. Which side comes first, and how do you avoid an empty market?

Demand comes first: Archibi users create designs whether or not a professional is nearby, so the app is useful on day one. Professionals join for free, and we grow them city by city where users already are.

The risk is a user who wants a pro and finds none nearby; we watch for it as we expand.

Q68 Once a client finds a professional, what stops them from going around you?

Nothing, and today that is fine, because Find Pro is free and its job is to make the match. Our value is earning the start of the project, again and again, not trapping anyone.

Any future fees will be designed so that both sides have a reason to stay on Archibi.

Q69 What if a professional you listed does bad work, and the client blames you?

Every professional is reviewed by our team before their profile goes live, and we are clear that agreements, quotes and work are between the client and the professional.

Reviews and ratings from clients are the natural next step: **ADD 39** plans for client reviews or ratings of professionals.

Q70 Who owns the images Archibi creates, and could a user face a copyright problem?

ADD 40 terms on image ownership and usage rights

Our Pro plan includes commercial usage rights, so professionals can use their designs in their work.

Q71 What if Apple or Google changes its rules, raises its fees or removes your app?

That risk is real for every mobile company. We follow store rules closely, we also sell by card, and Enterprise is arranged directly. Our professionals portal already runs on the web at pro.archibi.ca.

Q72 Brightment cuts into foundations. What is your liability exposure?

Every project starts with an in-person site assessment, permits are applied for before work begins, and windows are built to code. Brightment operates in Canada only today.

Insurance and warranties: **ADD 41** Brightment insurance coverage and warranty terms.

Q73 How much will you need to raise in total before you are profitable?

ADD 42 total capital needed to reach profitability, and the path to it

> **NOTE FOR THE PRESENTER** If this is not modelled yet, say so and commit to sending it after the meeting.

Q74 What will you have proven by the time you raise your next round?

This round takes us to ADD 43 milestones this round reaches, within ADD 32 runway in months.

Q75 Why should we believe your valuation?

ADD 44 valuation or cap, and the reasoning behind it

> **NOTE FOR THE PRESENTER** Anchor on milestones and comparables, not on what the company could become.

Q76 What are the three numbers you look at every week?

ADD 45 the three metrics the founders review weekly, and their current values

> **NOTE FOR THE PRESENTER** Answer instantly and without notes. Hesitating here hurts more than a weak number.

Q77 Who would buy Uritect one day?

The natural buyers are companies that want to own the moment a renovation begins: home improvement and furniture retailers, real estate and home-services platforms, and design software companies.

We are building a company that can stand on its own, which is also what makes it valuable to them.

Q78 What would make you shut down a product, or the whole company?

For a product: if it stops helping Archibi grow or stops serving its users, we pause it. For the company: if people stop finding value in seeing their space first, and no version of Design, Shop and Hire works. We watch for that in our numbers every month.

Q79 Why should we invest now rather than wait six months for more data?

Because now is when your help changes the outcome most: shaping our impact measurement, our U.S. plan and our first key hires. In six months the company will be more proven, and the price will reflect that.

Q80 If we pass today, what would change our mind?

Tell us, and we will come back with it. Whatever the reason, whether traction, unit economics or fit with your fund, a clear 'not yet' with a reason is the most useful thing an investor can give a young company.

> **NOTE FOR THE PRESENTER** Ask this yourself if the meeting is ending without a clear next step.

Prepared by Uritect Inc. for internal use before the Juvo Ventures meeting, October 2026. Juvo details are from juvovc.org and public investor databases in October 2026; confirm anything marked as unverified with the Juvo team. Product facts are as published on uritect.com, archibi.ca and brightment.ca. Market figure: Harvard Joint Center for Housing Studies, Leading Indicator of Remodeling Activity, July 2026 release.
